5   display unit, said picture formed by a frame of a plurality of
    fields, said picture decoding and display unit comprising:

         decoding means coupled to receive said bit stream, for
    carrying out said decoding processing on said predictively encoded
    pixel data to restore said original pixel data;

10   storage means coupled to said decoding means, for storing said
    restored pixel data received from said decoding means;

         read means coupled to said storage means, for reading pixel
    data from said storage means for outputting to said display unit
    for display thereon; and

15   control means coupled to said read means and said decoding
    means for making said decoding means start decoding processing of
    pixel data of a subsequent frame supplied subsequently to a certain
    frame including a last field to be finally displayed in the certain
    frame in response to reading of said last field from said read

20   means, said subsequent frame supplied immediately following a
    picture having the decoding processing thereon completed upon the
    reading of said last field, said picture being different from a
    picture comprised of said certain frame.

         Claim 22, line 7, before "includes" insert --further--.

    Please add new claims 27 and 28 as follows.
